Jakarta, as the capital of the Republic of Indonesia, is experiencing population density with a total population density reaching 14,357/km² referring to BPS data for 2023. This also has an impact on the education sector, especially primary schools or basic education, which is of course a special concern because it is the beginning of education for the next generation. Indonesian nation. The DKI Jakarta Government and the DKI Jakarta Education Department are committed to continuing to make improvements in terms of improving and adding facilities to schools, especially state elementary schools. One of them is that Elementary School 03 Cipete Selatan received a plan to revitalize the school building because the capacity of the study rooms and supporting facilities were no longer up to standard. It is hoped that the revitalization plan for the Elementary School 03 Cipete Selatan area will have a positive impact on a better quality of life for the residents of the city of Jakarta, especially in the Cipete Selatan sub-district, with a Tropical Architecture approach.

Keywords : Elementary School 03 Cipete Selatan, Revitalization, Tropical
