Analysis of the Application of Making Karo Typical Foods (Case Study of Trites / Green Soup Food in Karo District, North Sumatra)

Scientific Writing, Faculty of Letters and Culture, 2019

Keywords: Food, Traditional Food, Manufacture and Processing

This study aims to analyze the traditional Karo food and to introduce the making of traditional Karo Trites (Green Sop) food. This study uses secondary data obtained from questionnaire data taken from the test team for traditional Karo food. The data analysis method used in this research is descriptive qualitative, that is, the analysis is not carried out by statistical calculations. The sample taken from this study is data from three examiners. The results of this study are in the form of food which is then given an assessment of taste, aroma, appearance or color and texture. Karo traditional food must defend itself from the onslaught of fast food that is now dominating in Indonesian culinary. Cultural contact is inevitable, state barriers can no longer stand in the way because of the sophistication of technology and information. Today's young generation is less interested in regional specialties so it is very important to preserve traditional Karo foods.
