### **PEMBUATAN APLIKASI SISTEM ADMINISTRASI SEKOLAH SMK YAPIN 02 SETU.**

Scientific Writing, Department of Informatics Engineering, Faculty of Industrial Technology,  
Gunadarma University, 2022.

Keywords: Website, School, Payment.

Web-based applications are applications that are created to help people do something. Web-based applications can also be used in various fields, for example: Business, Projects, Company Management. In general, the education system in Indonesia requires a web application that functions to record school activities and helps schools store all data. The purpose of this writing is to create a Web-based school application which will be presented to Smk Yapin 02 Setu to help store recorded data and help the work of staff and teachers at the school, and this website can help students to get information on their payment bills. . The research method used in this writing is the SDLC (System Development Life Cycle) method. The stages of this method consist of the planning stage, analysis stage, design stage, implementation stage and trial stage. After testing, it can be concluded that this website can help and make it easier for users who use this website and the success rate of this website application is 86.32%
