Application Website for Online Reservations With a CMS Dashboard at Hodl Tree Cafe

Thesis. Department of Informatics. Faculty of Industrial Technology. Gunadarma University. 2023

Keywords: *Application Website, Online Reservations, CMS Dashboard*
(xiv + 83 + attachment)

HODL Tree is a cafe located in an urban area that is crowded with visitors. However, along with the increasing number of visitors, HODL Tree began to face some problems in managing *reservations*. Therefore, a *website*-based application is needed for *online reservations* with a *Content Management System (CMS) dashboard* at the HODL Tree cafe to make it easier for customers to place reservations *online* quickly and easily. The conclusion from the testing results is that the HODL Tree *website application* successfully displays all features effectively, is easily accessible from various devices, and demonstrates high performance with an *average score of 92.5* in the *Google Pagespeed test*. Overall, the application meets a good standard of quality. This research was conducted to be able to manage *point of sales*, namely managing monthly transaction recapitulation, managing monthly inventory recapitulation, and managing monthly sales recapitulation.
