

ABSTRACT

Internet is a necessity that human needs. Almost every line of life uses the internet. Hotspot is a location to get access to the internet network, especially through a wireless network, so that it is more practical to use. However, there are still some guarantees such as: the high cost of buying an internet package, and payments often occur. Therefore, a system layout for purchasing internet packages using vouchers was designed. This system can be built with a fee and voucher validity period well.

Key Word : MikroTik, Networking, WiFi, Voucher, Mikhmon.
