Message is a component in the communication process, namely in the form of a combination of thoughts using language or other symbols that are conveyed to others. The message itself requires security so that the message can arrive and match the intended person, therefore the application "Pesan Rahasia" was created. The "Pesan Rahasia" application is created using Android Studio software, Java and XML is the language used in the creation of this application and the method used in the 'Secret Message' application is the hill cipher method. This "Pesan Rahasia" application can increase the user's security in sending messages online.
