DEVELOPMENT OF TEACHING MATERIALS REGARDING FEATURES IN ORA-
NGE3.
Jurusan Teknik Informatika Fakultas Teknologi Industri, Universitas Guna-
darma, 2021.

(ix+ 34+ appendix)

Technology has become one of the things that develops from time to ti-
me rapidly and it can still continue to happen along with the many fields
that can be created or developed. Rapid technological developments make
information technology benefit, one of which is the increasing use of data by
individually or globally.

Data is a fact that can be in the form of symbols, images, numbers, letters
and others that can be further processed to produce information, in the era
of increasingly advanced information technology, data plays an important
role. Therefore, a discussion is needed in the form of teaching materials that
can help in mastering ways of processing data, in this case an application
is needed, namely Orange3, Orange3 itself is a data processing application
that can be used for free. In this teaching material, we discuss the features
of the Orange3 application, the tools found in the Orange3 application and
case studies using the Orange3 application.
