PEMBUATAN APLIKASI PANDUAN WISATA BANGKA BELITUNG PADA PERANGKAT ANDROID

PI. Jurusan Teknik Informatika, Fakultas Teknologi Industri, Universitas Gunadarma, 2021

Keywords: Android, Application, Tourism, Bangka Belitung, Kotlin.

(xiii + 66 halaman + Lampiran)

Smartphones as one of the current mobile phones equipped with technology such as computers have many benefits in helping various jobs or human needs. Various kinds of facilities on Android-based smartphone devices include applications that provide information on tourist guides to areas in Indonesia. In scientific writing, the Bangka Belitung tourist guide application is built on an Android smartphone device with the aim of providing convenience for users to get information and find the location of tourist attractions in Bangka Belitung. This travel guide application is supported by a map feature of the location of tourist attractions, hotels, and restaurants in Bangka Belitung. The method used in making this application uses the SDLC (System Development Life Cycle) method which consists of several stages, namely planning, designing, coding, and testing. Making this android-based application using android studio as application builder software and the Kotlin programming language. Based on application testing using the blackbox method, the results are in accordance with the objectives to be achieved.
