Web-Based JNE Gempol Agent Financial Report Application Using the Laravel Framework

PI. Department of Informatics, Faculty of Industrial Technology, Gunadarma University, 2022.

Keywords: Web, Reports, Finance, Laravel

(xiii + 45 + attachments)

Financial statements are important for a company to pay attention to. Therefore, good financial reports are needed to find out the results of the business being run. JNE Gempol agent is a business engaged in the field of freight forwarding services. Currently, the financial reports to the JNE Gempol Agent are still done manually. This causes inconsistent recording and errors. The purpose of this study is to create a website-based application for financial statements for JNE Gempol Agents. The research method used in making this application is the Systems Development Life Cycle (SDLC). This application is made using PHP Framework, namely Laravel and MySQL as database. This application has 8 menus, namely login, customer, adjustment balance, ending balance, daily report, monthly report, user list and logout. Features on the web include viewing data, deleting data, adding data, changing data, changing date, searching data and printing data. The test results with black box testing show that the application can run well and the features can run according to their function.
