DEVELOPMENT OF H.MESRAN SPECIALTY SHOP CASHIER WEBSITE USING PHP AND MYSQL

Scientific Writing. Information Systems. Faculty of Computer Science and
Information Technology. Gunadarma University. 2023.

Keywords: Grocery Store, Cashier, Website, PHP , MySQL.
(xiii + 63 + Appendix)

The development of information technology and communication has a significant impact on the business world, including retail stores like H.Mesran grocery store. Located in Cempaka Street, Depok City, West Java, H.Mesran grocery store recognizes the importance of updating its cashier system by providing an online cashier system. Currently, the store still uses manual calculation methods that are prone to errors and time-consuming. Therefore, a cashier website is created using PHP and MySQL as a solution to improve the efficiency of the sales process. Through the use of an online cashier system, it is expected that H.Mesran grocery store can conduct transactions more easily, accurately, and efficiently. Additionally, the website also facilitates storekeepers in managing inventory, viewing sales reports, and providing better customer service. The cashier website was developed using the SDLC (System Development Life Cycle) method and tested with Black Box Testing. The website can be accessed via <https://websitekasirhmesran.000webhostapp.com/>. The H.Mesran grocery store cashier website is a good solution to enhance the performance and efficiency of the grocery store.
