Numinuos is a special travel agent that provides travel services to tourist destinations on the island of Bali. With the target market of tourists both from within the country and from abroad. However, the impact of the tourism segment due to COVID-19, forcing Numinuos to create a new strategy to attract tourist interest in this Post-Covid era. Therefore, this research aims to create an information system, "Open Trip Travel Packages". So that tourists can easily add or invite their closest to travel to the island of Bali. This information system, "Open Trip Travel Package", uses the waterfall SDLC (System Development Life Cycle) method. The stages consist of system analysis, system design, system implementation, and system testing. This Numinuos website can be accessed via a browser by writing the localhost address as follows: : <http://127.0.0.1:8000/>, from the results of the questionnaire that has been given, it can be concluded that Numinuos website meets user experience expectations and has met the goals and standards of display design that are useable.
