CREATING A WEBSITE APPLICATION FOR RESERVING GOR KUKUSAN

Scientific Writing. Information System. Faculty of Computer Science and Information Technology. Gunadarma University. 2024

Keywords: MySQL, PHP, and Website.

(xiv + 56 Pages + Appendices)

This research aims to develop a website application that enables online reservations for the GOR Badminton Kukusan facilities, replacing the inefficient manual system. The application is developed using VSCode, phpMyAdmin, and XAMPP, employing the waterfall model as the research method. The website is expected to improve reservation efficiency by allowing users to make bookings without having to visit the location. The results show that the website was successfully created and can be accessed at <https://gorkukusan.wuaze.com/>.
