Technology has developed very rapidly. This makes information very accessible. The Android-based Ganyong Cultivation Information Application is an application that Android users can use to learn about Ganyong Cultivation. This application consists of four categories in the main menu, namely Definition, Benefits, How to Plant, How to Harvest. The research method used is the waterfall method, starting from planning an overview of the application, analysis, storyboard design, application interface design, application development, application testing. The test results on three smartphones and one tablet with different Android versions show that the Ganyong Cultivation Information application runs well. The size of the created application is 20MB.
