The rapid emergence of the coffee shop industry is currently having a new impact on consumer lifestyles. The meaning of a coffee shop is currently experiencing a shift, where visiting a coffee shop is not only a place to eat or drink, but a coffee shop can also be used as a place to fill free time, work meetings and meet relatives. Create an information website about Kopi Inn. Website containing information about coffee shop locations, menus and prices at coffee shops as well as coffee shop contact persons. The website makes it easy for users to access the menu types and menu prices from Kopi Inn without having to come to the location first. The step to ensure there are no errors in the application that has been created is by testing the application. Test the application using a web browser with Windows 10 64bit operating system specifications, Intel® Core™ i5+8th gen 8000h 2.3-4GHz processor, 8GB RAM, 1TB hard disk, NVIDIA GEFORCE GTX 1050Ti. The stages in this research use the waterfall model which includes planning, analysis, design, implementation and testing. This website has been successfully created and can be accessed at the address <http://kopiinn.000webhostapp.com/>.
