WEBSITE-BASED PHOTOBOOTH RENTAL APPLICATION

Scientific Writing. Information Systems. Faculty of Computer Science and Information Technology. Gunadarma University. 2023.

Keyword : Application, PhotoBooth, Rental, Website

(xiii + 50 +attachment)

PhotoX photobooth rental is a place of business that provides photobooth services to customers for a certain period of time. Customers can rent Photobooths for events such as birthday parties, weddings, exhibitions, or other special occasions. The PhotoX photobooth business has two types of photobooth and photobox types. The aim of this research is to make a website-based photobooth rental application. This website makes it easy for customers to rent photobooths so customers don't need to go to the location to rent a photobooth. The method used is the System Development Life Cycle (SDLC) which consists of five stages: planning, analysis, design, implementation and testing. This website is created using HTML, PHP, phpMyAdmin with Visual Studio Code as the text editor. The design is made using navigation structures and UML diagrams (use case diagrams, activity diagrams and class diagrams). The website has been successfully tested using black box testing and a browser. The trial results show that the application can run properly and all menus can function. Browser trials were carried out on two browsers, namely Google Chrome and Microsoft Edge. This application has been successfully hosted with the url address https://websitephotoboothx.000webhostapp.com/
