Bridal salon and makeup is one of the businesses that is growing rapidly in Indonesia. The demand for bridal salon and make-up services increases every year, especially during the wedding season. However, there are still many bridal salons and makeup that have not utilized information technology to improve service quality and business efficiency. Therefore, it is necessary to develop an information system for Bunda Arif Salon and Bridal Makeup using the Rapid Application Development (RAD) method. Bunda Arif Salon and Bridal Makeup is a place for beauty treatments consisting of haircuts, cream baths, facials, hair coloring, smoothing and also makeup services for customers who want to look beautiful at events they want to attend or weddings can use the services of Bunda Arif Salon and Bridal Makeup which is located in Mutiara Bekasi Jaya Ruko block F 1/2 Sindang Mulya Village, Cibarusah District, Bekasi Regency. The steps in making the website are, plan requirements, process system design and implementation. The website was created using the PHP programming language with MySQL database in testing using black box testing, testing on devices, testing on browsers and testing on users, the overall results on the website of the mother arif salon are as expected by users and can run well across devices and browsers. The Bunda Arif Salon website can be accessed via the address <http://bundarif-salon.42web.io/>.
