**Financial Statement Analysis of PT.Mahaka Media, Tbk by Using  
Liquidity Ratio, Solvency Ratio and Profitability Ratio 2018-2020**

Scientific Writing Faculty of Economy. 2021

Keywords : Financial Statements, Financial Performance, Financial  
Ratio, Solvency Ratio, Profitability Ratio

(ix + 64)

Assessment of a company's financial level can be done by analyzing the company's financial performance. To find out whether the company's financial condition is in good condition or not, various analyzes can be carried out, one of which is by using ratio analysis. The purpose of this study was to determine the financial performance of PT.Mahaka Media, Tbk from 2018 to 2020.

The analytical method used in this study is the liquidity ratio, solvency ratio and profitability ratio. The data source used in this study is secondary data in the form of annual financial statements of companies listed on the Indonesian stock exchange in 2018-2020.

The result obtained from this scientific research shows that the liquidity ratio is in an illiquid state, this can be seen from the liquidity ratios from 2018 to 2020 which have not met the standard ratio criteria. From the solvency ratio, it can be seen that the company is financed by debt because the company shows an insolvent condition because it does not meet the standard ratio. And when viewed from the overall profitability ratio of the company it shows unprofitable which means the company has decreased.
