PREPARATION OF FINANCIAL REPORTS USING ZAHIR ACCOUNTING SOFTWARE IN D'MUTIA SALON & SPA MUSLIMAH BUSINESS IN SUKABUMI CITY

Scientific Writing. Accounting major. Faculty of Economics. 2022

Keywords: Financial Statements, Accounting Information Systems, Zahir Accounting (ix + 58 + Attachments)

The development of information technology is the main reason for society to produce faster, more precise, and more accurate information. In an era of very rapid technological development, D'mutia Salon & Spa Muslimah as an object is a service company, this research still uses a manual accounting data processing system. The accounting information system makes it easy to make reports because it is presented automatically from transactions that have been entered during the current period. The research method used is a quantitative descriptive method with data sourced from primary data and secondary data. These data were obtained through observation, interviews, direct documentation, and literature study. The results of the study show that the preparation of financial reports carried out by the D'Mutia Salon and Spa Muslimah business in August and September 2021 is still carried out in a simple manner, namely only recording transactions in the form of recording cash receipts and disbursements. Preparation of financial reports using Zahir Enterprise 6 Software is by recording transactions of business receipts and expenditures on the services and cash options menu; recording transactions for purchases of consumables, payroll payments, credit purchases, and other payments on the cash and bank menus. Zahir Enterprise 6 accounting software will process inputted transactions to become financial reports that are useful for business owners more easily, precisely, and accurately.
