Analisis Perancangan Sistem Informasi Akuntansi Pengeluaran dan Penerimaan Kas Pada *Laundry Box*

TESIS. Program Studi Magister Manajemen Sistem Informasi, Jurusan Sistem Informasi Akuntansi, Universitas Gunadarma, 2019.

**Kata Kunci:** Accounting Information System

Laundry box located at Jl Wijaya Kusuma Blok BS5 No.9, Jatisampurna Kec Jatisampurna, Bekasi City, West Java 17433, where this laundry business provides kilogram washing services including laundry services and dry, wash and dry and iron, wash bed cover, wash thin blankets to blankets thick. During this time the service administration process is still using activities manual. Laundry receipt transactions are still recorded in the receipt of receipt laundry. So to search for data experiencing difficulties and requires a long process. And to find out laundry income too must recapitulate all receipts of laundry. Besides data collection purchasing goods for laundry purposes also still uses data collection manual so knowing how much laundry costs takes time relatively long time. For this reason, it is hoped that an information system will be created for recording laundry expenses and income can run quickly, effectively and efficiently.
