

ABSTRACT

Pungky Hari Wira Atmaja NPM : 92215049, title of research “Design of Management Information System For Thesis Archive at Sekolah Tinggi Ekonomi Syariah Islamic Village by Using User Centered Design Method.”

The problem on running system at STES Islamic Village are conventional way to filter title of thesis for approval, thesis guidance note card is a single control to monitor student thesis, and BAK in managing hard copy and soft copy thesis that has not been maximum.

To solve the problem, the author make research to create application that can accelerate the process of duplicating themes or thesis title, to manage hard copy and soft copy thesis and to monitor student thesis progress.

The results of design management information system for thesis archive at STES Islamic Village by using web basis, PHP and MySQL database, this application giving user accelerate the process of duplicating themes or thesis title by way of student thesis catalog. The other function, this application which develop into one interface, can manage hard copy and soft copy thesis which doing by BAK and it can replace the function of hard copy thesis tutoring card as a single control in monitoring progress of student thesis.

Keywords: Management Information System, Thesis, User Centered Design
