

ABSTRACT

Arifin Andi Abd Karim. 92315045

Design of Enterprise Architecture Model Academic Information Systems and Student Affairs Using the Framework of Open Architecture Framework (Togaf). (Case Study: Nahdatul Ulama Indonesia Jakarta University).

THESIS. Master Of Information Systems Management, Department of Software Information, Gunadarma University, 2018.

Kata Kunci : Enterprise architecture, Togaf ADM, Business architecture, data architecture, application architecture, technology architecture.

(xii + 99 + Lampiran)

Information systems and technologies have become a very important component of business and organizational success. Only information needed for. This causes the copy information to overlap and the existence of different system platforms with each other, so that it is not in accordance with the mission and implementation goals. One of the main causes of different Platforms is as a result of processes and information.

In this study using Methodology of Open Framework Architecture Framework Method (TOGAF ADM). This research was conducted based on the value chain and given to Opportunities and Solutions on TOGAF ADM with research sample at a private university in DKI Jakarta. This research resulted in a blueprint as a foundation for the development of SI architecture in the management of universities to improve service.
