ABSTRACT

*Online Communication Patterns Between Lecturers and Students Of Political Science Jakarta Veteran National Development University through Virtual Platform*

*Keywords: Barriers, Communication, Online*

*Learning (x + 63 + attachment)*

During the Covid-19 Pandemic Conditions, lectures were conducted at a distance (PJJ). This is done by the government to reduce the level of mass spread of the covid-19 virus. The purpose of this study is to study the communication received by students of the National Veterans Development University of Jakarta (UPNVJ) during distance learning or courageous. The reason the researcher took the object of research was the UPNV students because South Jakarta was a red zone spread co-19. The method of this research is descriptive qualitative research using interview data collection techniques with 5 informants of UPNVJ political science students and using literature study. The results of this study are communication or noise disturbances that occur during PJJ learning at UPNVJ are signal disturbances, limited quotas, and ineffective learning delivery. Submission of this less effective learning occurs because of many misunderstandings between lecturers and students. The misunderstanding occurred because the lecturer conveyed only through Google Classroom, and the lecturer rarely explained the material, only gave the assignment. That caused ineffectiveness in the delivery of learning materials for UPNVJ students.
